- [List of system data sources](#)

In this article we are presenting a list of **system data sources** available since [AMODIT 221231 release](#) .

CAUTION! This list of system data sources is subject to change.

System data sources localization

The picture below shows where the system data sources are placed inside AMODIT.

The screenshot shows the AMODIT interface with the 'Data sources' page selected. The page title is 'Data sources' and the user is 'Łukasz Bott'. The main content area displays a table titled 'Performance monitor aggregated' with 18 entries. The table has columns for Server name, Database server name, Application instance name, Organization name, Source type, Operation type, Year, Month, and Total seconds. The table is currently showing 1 to 18 of 18 entries.

Server name	Database server name	Application instance name	Organization name	Source type	Operation type	Year	Month	Total seconds

List of system data sources

Data source	Description
Performance monitor aggregated	A performance monitor data aggregated to days, servers, applications and operations (no details about rules, dictionaries etc.). CAUTION! Only total duration in seconds is being summerized for the period of the last 30 days.
Performance monitor details	All data recorded by a performance monitor. This data source contains lots of data thus reports based on it can render slowly. It should be used only with a filtering to decrease an amount of data read. CAUTION! Data are being taken from the last 24 hours.
System log	The system log data aggregated to days with only the most important information (f.e. no call stack). Multiple records with the same subject aggregated to a single record (for performance reasons). Additional column with number of records in a given day.
Cases by creation date	All cases processed in the system aggregated by days of their creation, process, current status, stage, user and department.
Cases by processing time	All cases processed in the system with their processing time aggregated by days of their creation, process, current status, stage, user and department. Processing time of open cases is calculated till now. Processing time is shown in days.
Reports	A list of all reports defined by users.
Processes	A list of all processes.
